Findings

- **High:** Apple MDM push certificate expires in 21 days – Renew with the same Apple ID, otherwise all Apple devices must be re-enrolled.
- **High:** 3 setting(s) with contradicting values – The same setting is configured differently by several assigned policies.
- **High:** 1 object(s) assigned to deleted groups – Assignments point to groups that no longer exist in Entra ID.
- **High:** 1 jailbroken/rooted device(s) – Compromised mobile devices.
- **Medium:** Apple VPP token “Demo-Kunde Apps” expires in 48 days – Plan the renewal.
- **Medium:** 2 unassigned object(s) – Clean-up candidates or forgotten tests.
- **Medium:** 4 noncompliant device(s) – Conditional Access may block these devices.
- **Medium:** 3 unencrypted Windows/macOS device(s) – BitLocker or FileVault not active.
- **Low:** 2 setting(s) configured several times with the same value – No contradiction, but redundant.
- **Low:** 2 device(s) without check-in for over 30 days – Candidates for device clean-up rules.
- **Low:** 1 Autopilot device(s) without deployment profile – These devices will not go through Autopilot setup.
- **Info:** 13 object(s) unchanged for over 12 months – Check whether they are still needed.
- **Info:** 3 % of objects have a description – Descriptions in Intune or notes here improve the documentation.

Platform connectors & expiry dates

Expiring certificates or tokens stop management of the affected devices. The Apple MDM push certificate must be renewed with the same Apple ID.
